MADE IN THE UNITED STATES OF AMERICA

CONTENTS OF VOLUME 4

Number 1, March 1974

Richard Foster Flint. Guest Editorial. Three Theories in Time 1

Wayne M. Wendland and Reid A. Bryson. Dating Climatic Episodes of the Holocene 9

Clayton H. Reitan. A Climatic Model of Solar Radiation and Temperature Change 25

George I. Smith. Quaternary Deposits in Southwestern Afghanistan 39

Ruth Gruhn, Alan Lyle Bryan, and A. J. Moss. A Contribution to Pleistocene Chronology in Southeast Essex, England 53

E. C. A. Runge, T. W. Walker, and D. T. Howarth. A Study of Late Pleistocene Loess Deposits, South Canterbury, New Zealand. Part I. Forms and Amounts of Phosphorus Compared with other Techniques for Identifying Paleosols 76

M. R. Voorhies. Pleistocene Vertebrates with Boreal Affinities in the Georgia Piedmont 85

Victor R. Baker. Paleohydraulic Interpretation of Quaternary Alluvium Near Golden, Colorado 94

Book Review 113

Erratum 115

Number 2, June 1974

Reginald E. Newell. Changes in the Poleward Energy Flux by the Atmosphere and Ocean as a Possible Cause for Ice Ages 117

W. A. Sanchez and J. E. Kutzbach. Climate of the American Tropics and Subtropics in the 1960s and Possible Comparisons with Climatic Variations of the Last Millenium 128

Karl W. Butzer. Geological and Ecological Perspectives on the Middle Pleistocene 136

Q. B. Hendey. Faunal Dating of the Late Cenozoic of Southern Africa, with Special Reference to the Carnivora 149

Reid A. Bryson and John E. Kutzbach. On the Analysis of Pollen–Climate Canonical Transfer Functions 162

Jean C. B. Waddington and H. E. Wright, Jr. Late Quaternary Vegetational Changes on the East Side of Yellowstone Park, Wyoming 175

A. L. Bloom, W. S. Broecker, J. M. A. Chappell, R. K. Matthews, and K. J. Mesolella. Quaternary Sea Level Fluctuations on a Tectonic Coast: New $^{230}Th/^{234}U$ Dates from the Huon Peninsula, New Guinea 185

David A. Johnson and Andrew H. Knoll. Radiolaria as Paleoclimatic Indicators: Pleistocene Climatic Fluctuations in the Equatorial Pacific Ocean 206

P. J. TONKIN, E. C. A. RUNGE, AND D. W. IVES. A Study of Late Pleistocene Loess Deposits, South Canterbury, New Zealand. Part II. Paleosols and their Stratigraphic Implications 217

BOOK REVIEW 232

ANNOUNCEMENT 233

ERRATUM 234

NUMBER 3, SEPTEMBER 1974

K. V. KOROBITSYNA, C. F. NADLER, N. N. VORONTSOV, AND R. S. HOFFMAN. Chromosomes of the Siberian Snow Sheep, *Ovis nivicola,* and Implications Concerning the Origin of Amphiberingian Wild Sheep (Subgenus *Pachyceros*) 235

R. P. SUGGATE. When Did the Last Interglacial End? 246

R. M. KOERNER AND W. S. B. PATERSON. Analysis of a Core Through the Meighen Ice Cap, Arctic Canada, and its Paleoclimatic Implications ... 253

ROBERT F. BLACK. Late-Quaternary Sea Level Changes, Umnak Island, Aleutians—Their Effects on Ancient Aleuts and Their Causes 264

G. EINSELE, D. HERM, AND H. U. SCHWARZ. Sea Level Fluctuations During the Past 6000 yr at the Coast of Mauritania 282

CALVIN J. HEUSSER. Vegetation and Climate of the Southern Chilean Lake District During and Since the Last Interglaciation 290

MATTI SAARNISTO. The Deglaciation History of the Lake Superior Region and its Climatic Implications 316

MICHAEL G. PETIT. The Racemization Rate Constant for Protein-Bound Aspartic Acid in Woodrat Middens 340

G. H. COLE AND M. R. KLEINDIENST. Further Reflections on the Isimila Acheulian 346

THOMAS F. LYNCH. The Antiquity of Man in South America 356

LETTERS TO THE EDITOR 378

NUMBER 4, DECEMBER 1974

HERMANN FLOHN. Background of a Geophysical Model of the Initiation of the Next Glaciation 385

J. CHAPPELL. Late Quaternary Glacio- and Hydro-isostasy, on a Layered Earth 405

NORMAN W. TEN BRINK AND ANKER WEIDICK. Greenland Ice Sheet History Since the Last Glaciation 429

D. M. HOPKINS, R. W. ROWLAND, R. E. ECHOLS, AND P. C. VALENTINE. An Anvilian (Early Pleistocene) Marine Fauna from Western Seward Peninsula, Alaska 441

P. J. OSBORNE. An Insect Assemblage of Early Flandrian Age from Lea Marston, Warwickshire, and Its Bearing on the Contemporary Climate and Ecology 471

ROBERT V. RUHE. Holocene Environments and Soil Geomorphology in Midwestern United States 487

J. GORDON OGDEN III. Shoreline Changes Along the Southeastern Coast of Martha's Vineyard, Massachusetts for the Past 200 Years 496

QUATERNARY RESEARCH

An Interdisciplinary Journal

EDITORIAL POLICY

Quaternary Research is devoted to *interdisciplinary* articles dealing with the Quaternary Period. Editorial policy requires that articles must be of broad interest, of basic significance to more than one discipline, and of high merit. Previously unpublished research results, comprehensive reviews of a field of knowledge, and occasional English translations of outstanding articles in other languages will all be considered. Generally, articles should be in English, but a small proportion of articles in French, German, or Russian will be accepted. Articles should not exceed 5000 words, but exceptions can be made for especially significant contributions. All articles will be reviewed by at least two referees.

Manuscripts and figures should be submitted at least in duplicate (a third copy could speed processing) to:

Quaternary Research
Editorial Office
University of Washington
Seattle, Washington 98105

INSTRUCTIONS TO AUTHORS

General Instructions

Manuscripts should be written in clear and concise English and should conform to the general style of the journal and the specific instructions listed below. Manuscripts that are not adequately prepared will be returned to the authors, since it is not feasible for the Editors to revise or rewrite manuscripts. Contributors, particularly those unfamiliar with English usage, are encouraged to seek the help of colleagues in the preparation and review of manuscripts prior to submission. This practice reduces the time required for review and avoids delays in publication.

Form and Style. Manuscripts should be concise but detailed enough to permit critical appraisal. They should be typewritten and double-spaced throughout (including tables, legends, and footnotes) on one side of approximately 22- × 28-cm (8.5- × 11-in.) paper with 2.5-cm (1-in.) margins. Tables and figure legends should be typed separately and placed at the end of the manuscript. All pages, beginning with the title page and including tables and figure legends, should be numbered consecutively and fastened securely. The title page should include the article title, author(s), affiliation(s) and address(es), and suggestions for index entries. Addresses should include zip codes or postal districts when applicable. All correspondence regarding the manuscript will be made with the person submitting the manuscript.

Authors are requested to include an Abstract (50-200 words, typed on a separate page following the title page). The Abstract should be a concise and informative summary that can be copied verbatim by bibliographers. The title must be suitable for indexing.

Units. Metric units should be used throughout, with English equivalents in parentheses if originally given in English units. When used in conjunction with numerals, units should be abbreviated and unpunctuated (e.g., cm, g, %). Use the American Chemical Society Handbook as a guide.

Footnotes. Footnotes in the *text* should be identified by superscripts consisting of Arabic numerals and should be typed on a separate sheet; footnotes in the *tables* should be identified by superscripts consisting of the lower-case letters a, b, c, etc., and placed at the bottom of the table.

Tables. Tables should be denoted by Arabic numerals and cited consecutively in the text. Each table should be titled and typed double-spaced on a separate sheet. *Units must be clearly indicated for each of the column entries in the table.*

Figures. All figures should be denoted by Arabic numerals and cited consecutively in the text, with figure legends typed on a separate sheet. Units should be clearly indicated in the figures themselves.

Please Note: All figures are to be submitted in such form as to permit photographic reproduction without retouching or redrawing, including the lettering. Lettering is reproduced as part of the photoengraving and is not set in type. Line drawings should be carefully drafted with black India ink on white drawing paper or blue drafting cloth, if possible no larger than 22- × 28-cm (8.5- × 11-in.) overall. The lettering should be large enough to allow a 50% reduction. High-quality glossy prints are acceptable for drawings and required for photographs. Color plates or fold-out illustrations cannot be accommodated unless financed by the author.

References. References should be cited in the text by author's surname and date such as "Doe (1970) reported that . . ." ". . . as previously reported (Doe *et al.*, 1970)." Suffixes (a, b, etc.) should be used to distinguish two or more works by the same author(s) in the same year; *e.g.*, Doe (1971a, 1971b). *Page numbers should be given whenever practicable.* A direct quotation should always be page referenced; a paraphrased statement should be page referenced if the article exceeds 10 pages. The reference section should be arranged alphabetically according to the author's surname. Order of items: author(s), date of publication, title of article, journal or book title (written out in full rather than abbreviated), volume number, inclusive pages, and (for books only) publisher and city, e.g.:

ZIN, S. (1971a). The problem of Quaternary climatic changes. *Quaternary Research* **1**, 1–10.

FALK, B., and LI, M. (1972). "The Cause of Quaternary Climatic Changes." Vol. 1. Academic Press, New York.

COHEN, R. (1967). The equatorial ionosphere. *In* "Physics of Geomagnetic Phenomena." (S. Matsushita and W. H. Campbell, Eds.), Vol. 1, pp. 561–613. Academic Press, New York.

Author's alterations in excess of 10% of the cost of composition will be charged to the author.

Reprints. 50 reprints of each article will be supplied free of charge. Additional reprints can be ordered on the form accompanying galley proof.
